

CORPORATE ENVIRONMENTAL POLICY

OVERVIEW: Pall Corporation solves complex contamination problems. Every manufacturer, municipal water supplier, laboratory, hospital and blood center is a potential Pall customer. Collectively they share a need to be profitable, efficient and environmentally responsible producers of high-quality products. Contamination is their common enemy. Left undetected or unchecked, it can destroy high-value products, raise warranty costs, shut down plants, violate governmental regulations, limit or slow innovation, and expose consumers to health and safety risks. Its consequences can be measured in human terms as well as in hard dollars.

QUALITY: Pall Corporation is committed to providing effective environmental, health and safety processes at all of our facilities. We maintain a program of continuous improvement to identify opportunities and prevent pollution.

PREVENTION: Each of our subsidiaries is expected to maintain an Environmental Team to:

1. Conduct our operations with respect for the environment,
2. Maintain waste minimization and solid waste recycling programs,
3. Support the use and purchase of products made from recycled materials,
4. Support corporate and facility environmental, health and safety monitoring programs, and
5. Ensure compliance with Pall's environmental policy and government regulations.

HEALTH AND SAFETY: At each of our facilities, we organize and empower Safety Committees to make improvements in health and safety practices.

COMPLIANCE PROGRAMS: Each site will establish an environmental management system to ensure our requirements are fully met.

AUDITING: Pall Corporation audits its operations periodically to determine compliance with its policies and to ensure the highest levels of excellence in our programs.

COMMITMENT: Pall's commitment to meeting or exceeding all applicable environmental, health, and safety regulations plays a central role in our daily operations. It is through this environmental commitment that we can assure our continuing conformance to sound environmental stewardship and the health and safety of those who manufacture or use our products.
