Profile II RF style filter cartridges are comprised of a polypropylene filter medium cylindrical sleeve formed by a proprietary Pall process with a polypropylene molded core.

The inner section of the medium sleeve (inside diameter) consists of a constant pore region to provide the filter rating performance, while the pore size of the outer section varies continuously for effective pre-filtration of particles larger than the rated size.

Profile polypropylene filter medium does not contain surfactants or binder resins.

RF Profile II filter cartridges are suitable for use in aqueous-based food and beverage applications.

An initial flush is recommended prior to use.
