**Typical Air Flow Rates**

![Graph showing typical air flow rates](image)

- **Typical initial clean medium ΔP per 254 mm (10 in.) element, air at 20°C (68°F).** For multi-element cartridges, divide pressure drop by number of 254 mm (10 in.) elements. Non-linear cartridge turbulence factors are incorporated into housing pressure drop values. For complete assembly pressure drop, add filter cartridge medium value to housing value at specified flow rate. For gases other than air or nitrogen, contact your local Pall distributor.

**Integrity Test Values**

- **Per 254 mm (10 in.) Cartridge:**
  - **Forward Flow (air test gas):**
    - 60:40 IPA : Water wet (v:v) 15 cc/min at 1040 mbar (15 psi)
