

# Contamination Control

for the Pulp and Paper Industry

# Introduction

Pall Corporation has been servicing the pulp and paper industry for over 30 years and is recognized as the leader in filtration science through advancing technologies that improve the reliability and availability of process fluids to reduce total cost of operation.

## Asset Reliability and Process Improvements through Contamination Control

In today's business climate, the pulp and paper industry needs suppliers that can offer a comprehensive approach to asset protection and process optimization. The machinery and equipment in operation in pulp and paper mills are highly dependent on the proper control and maintenance of fluids to desired operating conditions.

## Our approach is simple

- Asset / Process review and priority setting
- Define current conditions and objectives
- Audit and provide recommendations
- Implement and train plant personnel
- Monitor and quantify system performance
- Review established goals and adapt as required

# Pall's Range of Capabilities and Services

## Rentals and Service

Pall Rentals offers you smart ways to implement solutions without delay and with the full support of local experts, without the CAPEX burden of purchase. Additionally our services include:

- Contamination mapping & monitoring
- Rental equipment for fluid depollution
- Filter maintenance and equipment upgrades
- Rotating equipment services, ie lube oil depollution, cleanliness assessment and monitoring

## Field Support

Pall Corporation provides services to our customers through a highly trained workforce both at the local level and from industry specialists. Our services include:

- Process, hydraulic and lubrication system audits
- Fluid and system analysis to improve asset reliability
- System Inspection and troubleshooting
- Oil purifier training and commissioning
- Inventory management

## Scientific and Laboratory Services

Pall Corporation has a broad range of scientific and laboratory services throughout the world to support our customers' contamination control issues. The Pall SLS team provides the following services:

- Analytical support for solving process upsets that may impact production, filter and component life
- Technical support for commissioning new applications
- Filterability studies to evaluate best technologies to meet customer requirements
- Quality assurance for ongoing products

# Pulp and Paper Process

## Wood Yard

## Steam Generation

## Chemical Recovery

## Pulp Mill

## Stock Preparation

## Paper Machine

- Hydraulic & Lube
- Point-of-Use Condensate Recovery Water
- Boiler Feed and Potable Water
- Chemical

From hydraulics to lubrication, recycled waters and chemicals to boiler feed water, the reliability and availability of a pulp and paper mill can be improved by the proper selection of filtration technologies that ensure consistent levels of contamination control throughout the paper manufacturing process. Pall products are designed to provide the highest level of protection from beginning to end of service life. The diagram below depicts some of the target applications in the paper making process.

## Hydraulic and Lube Filtration

### Athalon® Filters

Pall Athalon filters combine an innovative filtration media pack design and stress-resistant filter element construction to provide:

- Superior contamination control over the full service life of the filter element
- Enhanced performance under cyclic flow and pressure conditions
- Industry leading Beta > 2000 filter efficiency rating for faster system cleanup rates
- Optimum service life and envelope size
- Excellent overall protection for your hydraulic and lubrication equipment
- Anti-static design dramatically reduces damaging static charge generation compared to conventional lube and hydraulic filter elements

Athalon filter housing range

### Benefits:

- Increased system reliability
- Reduced operating costs
- Reduced filtration costs
- Environmentally friendly disposal

### Fluid Purifiers

**Fluid Conditioning Purifiers** - integrate the latest features in fluid purification technology making it even easier to maintain proper fluid conditions. Pall purifiers remove 100% of free gases and water, up to 80% of dissolved gases and water and incorporate Athalon filter technology for high performance particulate removal.

HNP076 Series Fluid Purifier

HDP10 Series Fluid Purifier

### Diagnostic Equipment

Monitoring hydraulic and lubricating fluid condition is vitally important to a predictive maintenance program. Pall has pioneered new technologies that allow more reliable condition monitoring that enable plant personnel to take corrective actions.

PCM500 Cleanliness Monitor

Pall Water Sensor

## Process Fluid Filtration Products

### Melt Blown Filtration Products

Pall Corporation has pioneered many new filter technologies to meet the demands of various process fluids. Pall 'melt blown' technology is an innovative process of extruding fibers to produce the desired media profile to optimize filter performance. The comprehensive filter element range is available in depth, fan pleat and patented laid over pleat (Ultipleat®) designs.

Melt Blown Capabilities

Marksman™ Filter Elements

Nexis® Filter Elements

Process Fluid Filter Housings

### Condensate Recovery Water Products

Pall material science engineers have developed a number of innovative filter products that can operate at elevated temperatures and process conditions. A range of synthetic and inorganic products are available to meet these challenging process conditions in a cost effective manner.

Rigimesh® Filter Elements

### Boiler Feed water Treatment

Pall micro-filtration (MF) water treatment systems have become an industry standard for removing pathogens, turbidity, iron, manganese and other contaminants from surface waters. Pall systems are available as stand-alone packages or can be combined with Reverse Osmosis (RO) systems to produce high quality boiler feed water. The combined MF/RO package can be sized for plant expansions or as part of a complete water treatment system for the plant.

Water Treatment System

Pall Corporation has become the global leader in the high-tech filtration, separation, and purification industry by meeting the diverse needs of customers across the broad spectrum of life sciences and industrial markets. Our highly-engineered process solutions protect people and critical assets, while minimizing emissions and waste.

Global demand for our solutions is driven by water and energy needs, imperatives for quality and productivity, high-tech products and processes, increasing regulations and rising standards of living. We have both the global reach and local technical support to meet this demand. Customers choose Pall for our expertise, product quality, innovation and financial strength. It is the ability to deliver for both our customers and shareholders that sets Pall apart.

## Energy Transition

At Pall we are committed to helping advance the production and use of green fuels, utilizing a wide range of separation and purification solutions. Pall also supports the carbon capture, utilization and storage (CCUS) sector where each approach has unique filtration and separation needs that can be addressed using Pall technologies.

## Technology Recognition

**National Inventors Hall of Fame** (2008) Dr. David B. Pall, founder of Pall Corporation, was inducted into the National Inventors Hall of Fame. Dr. Pall's body of work in the field of filtration science earned him a place among legendary innovators including Alexander Graham Bell, Walt Disney, Thomas Edison and Henry Ford.

## Scientific and Laboratory Services

A principal element in Pall's customer support operations is our Scientific and Laboratory Services (SLS) Department.

Filtration problems arising in the field can be assessed and simulated in the laboratory. Close monitoring by Pall scientists can determine the engineered solution to your contamination and separation problems and advise accordingly.
