

**Subject: Recommended Shelf Life of Pall Disposable Filter Products Supplied Non-sterile**

**Product(s): Pall Laboratory Filters Supplied Non-sterile and Pall Food & Beverage Cartridge Filters**

**General information: Recommended shelf-life and storage conditions**

Pall recommends a customer shelf life of 5 years from the date of manufacture of the above articles when the following storage conditions are maintained.

- Store at a temperature between 5 °C and 30 °C in dry conditions
- Do not expose to direct sunlight, radiation or direct weather conditions
- Store in original shipping bag and boxing
- Exercise care during handling to avoid physical damage. Ensure shipping bag and any seals are intact prior to use. Plastics can be damaged if roughly handled, particularly at sub-zero temperatures. Thermal shock by quickly raising the temperature from subzero conditions should also be avoided.
- Visual inspection of packaging and product and, where appropriate, integrity testing is recommended prior to use. Do not use damaged articles.

For conditions outside the above or questions related to correct storage please contact Pall for further advice.

Please note that in contrast, filters that have been supplied 'sterile' will have specific shelf life expiry date as given on the product label.
